## **Abstract**

For those of you who hear a voice when you read these words, and those of you who can conjure one, – there is a sense in which we might regard the audio you hear to be the result of distributed synthesis.

## 1 Thirde Milestone Requirements

from Milestone reviews

**Congratulations!** You are now moving into the final stages of your candidature.

The Third Milestone Review is the third and final milestone in your Higher Degree by Research (HDR) program. Successfully completing this milestone shows you are on track to finish your HDR.

In your Third Milestone Review, you will produce an advanced draft of your thesis or project (written work and/or creative project) and present your research to your Review Panel and wider research community.

Discuss the requirements and expectations of your Third Milestone Review with your supervisory team and/or your HDR Delegated Authority (HDR DA) before submitting the written documentation. Your school or discipline may have additional requirements.

Submit written documentation at least 15 days before your milestone presentation to give your panel time to review. You will be given instructions once your milestone is scheduled.

The written documentation for your Third Milestone Review must include:

- A research summary and progress to date
- Statement of ethics and institutional biosafety approval status
- Updated research data management plan, where appropriate
- Updated publication plan including evidence of any pending or completed research outputs and timelines.
- Updated statement of consideration of the responsible use of generative artificial intelligence in your research, as per RMITs guidelines, where appropriate.
- Updated statement of consideration of the potential impact, positive and negative, of the proposed research and engagement of stakeholders, where appropriate.

- Evidence you have completed required courses, where appropriate
- Other requirements of your school or discipline.

## **1.i Research Summary**

Your research summary must include:

- Your thesis/project title
- Abstract (summary of your research)
- The aim and rationale of your research including the research problem and significance
- The research questions, hypothesis and / or conceptual framework, as disciplinary appropriate
- A critical review of the relevant literature and initial list of key references, or community of practice context for the research, as disciplinary appropriate
- The methods and rationale (methods and methodology)
- Updated outline/summary of your progress against your research plan
- A clear path and detailed timeline showing how the thesis/project will be completed in the time between the third milestone review and the submission date.

## **1.ii Research progress to date**

You are required to demonstrate your research progress.

If you are developing a thesis, you must submit (as appropriate for your discipline):

- at least four draft chapters of your thesis or
- equivalent in draft or published papers.

If you are doing creative project-based research, you must submit:

- an advanced draft of your dissertation and
- a portfolio of work (a portfolio is a representation of your final project outcome, in images, recordings or text, depending on your project).
